

AI-Powered Intelligent Interview Question Management System

User Interface Design Specification

Version: 1.0

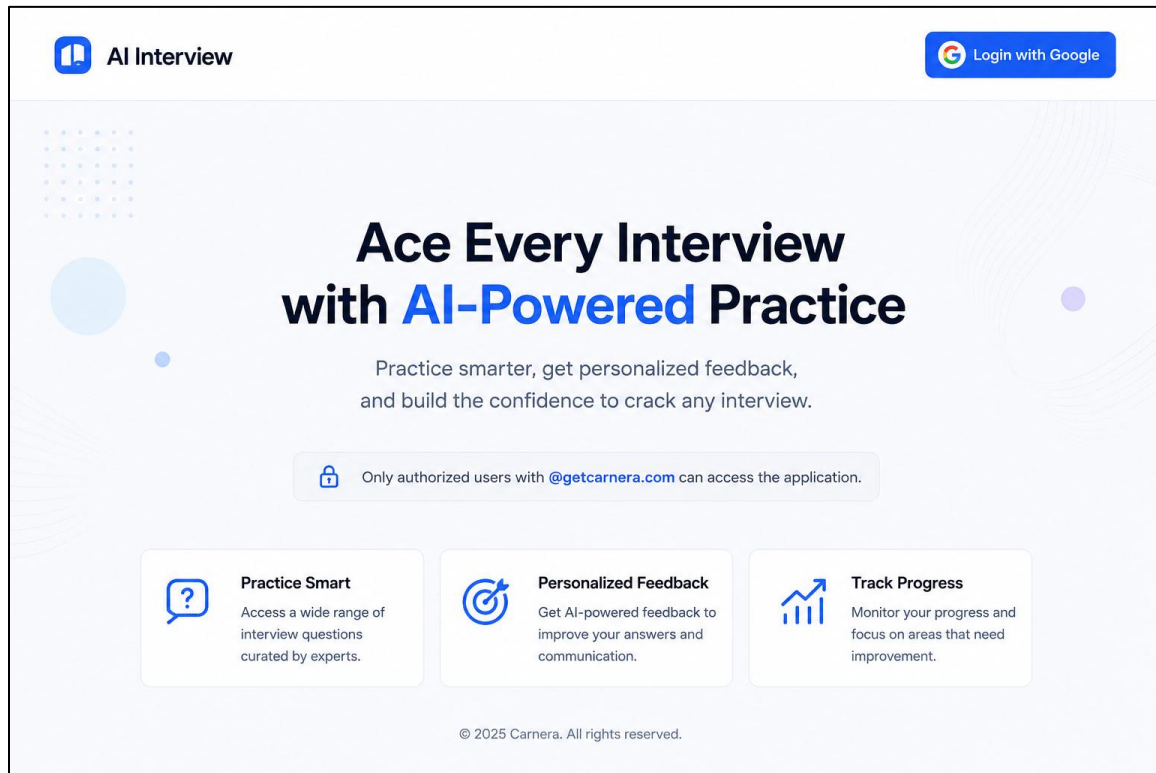

Prepared By: Utkarsh Krishna Tripathi

Date: 03/07/2026

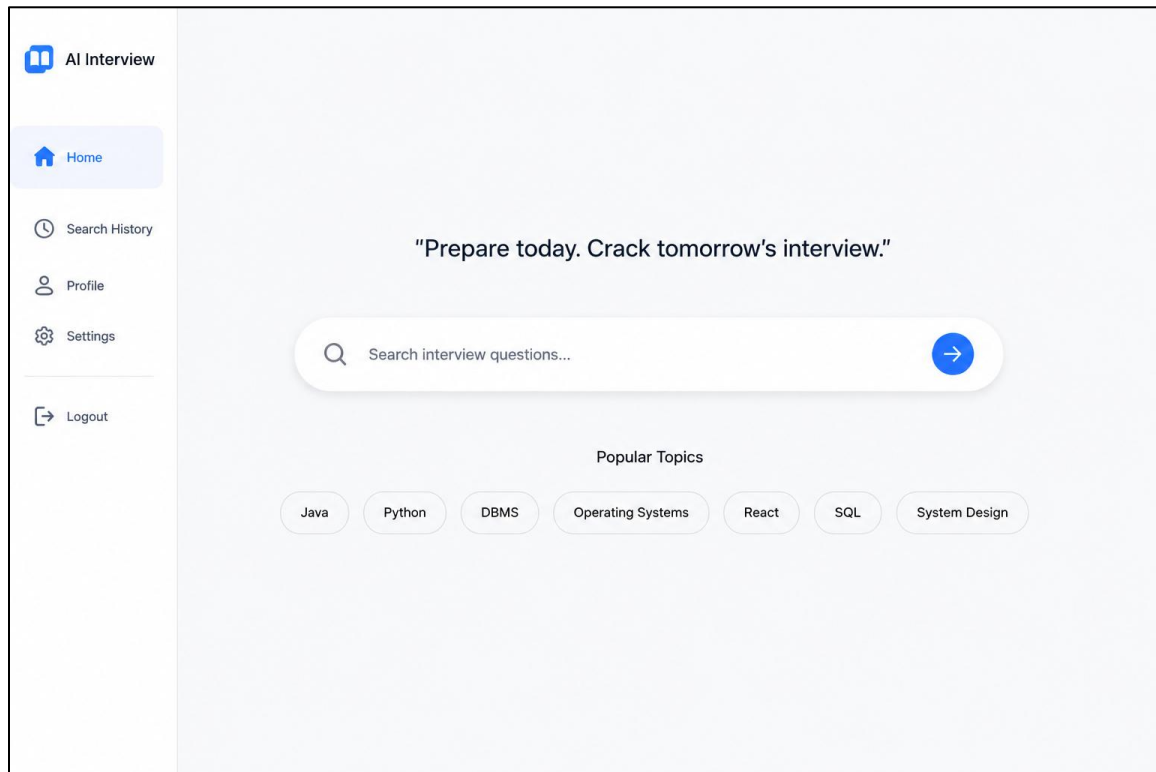

Purpose

This document presents the user interface (UI) designs created for the AI-Powered Intelligent Interview Question Management System. It serves as a visual reference for the application's workflows, screens, and role-based interfaces developed during the design phase.

1. Landing Page (Before Login)

2. Home Dashboard (Logged In)

3. Search Results Page

The screenshot displays the 'AI Interview' search results page for the query 'Array in Java'. The interface includes a top navigation bar with the 'AI Interview' logo, a home icon, a search bar containing the query, and a settings icon. Below the search bar, it states 'Found 18 results for "Array in Java"' and provides a 'Sort by: Relevance' dropdown menu.

Filters: A sidebar on the left contains filter sections for 'Topic', 'Difficulty', 'Organization', and 'Manager'. The 'Topic' section has 'Core Java' (12 results) selected. The 'Difficulty' section has 'Medium' (9 results) selected. The 'Organization' and 'Manager' sections have dropdown menus for selection. A 'More Filters' button is at the bottom of the sidebar.

Search Results: The main area lists six questions, each with a bookmark icon and associated tags:

1. What is an array in Java? (Core Java, Easy)
2. How do you declare and initialize an array in Java? (Core Java, Easy)
3. What is the difference between array and ArrayList in Java? (Core Java, Medium)
4. How do you find the largest and smallest element in an array? (Arrays, Medium)
5. How do you reverse an array in Java? (Arrays, Easy)
6. How do you remove a specific element from an array in Java? (Arrays, Medium)

Search History: A section on the right titled 'Search History' with a 'View all' link, showing a list of previous searches: 'Array in Java', 'HashMap in Java', 'Singleton Design Pattern', 'List vs Set in Java', and 'Java OOPs Concepts'.

Related Topics: A section on the right titled 'Related Topics' with buttons for 'Arrays', 'Data Structures', 'Core Java', 'Collections', 'Problem Solving', and 'Interview Preparation'.

4. Viewer Menu

The screenshot displays the 'AI Interview' application interface. At the top, there is a navigation bar with the 'AI Interview' logo, a home icon, a search bar containing 'Array in Java', and user profile icons (a blue circle with a right arrow and a gear icon). Below the navigation bar, the main content area shows 'Found 18 results for "Array in Java"'. On the left, a 'Filters' sidebar allows filtering by 'Topic' (Core Java: 12, Data Structures: 4, Interview Questions: 2), 'Difficulty' (Easy: 6, Medium: 9, Hard: 3), 'Organization' (Select organization), and 'Manager' (Select manager). A 'More Filters' button is at the bottom of the sidebar. The central area lists six interview questions, each with a bookmark icon and difficulty tags: 1. 'What is an array in Java?' (Core Java, Easy), 2. 'How do you declare and initialize an array in Java?' (Core Java, Easy), 3. 'What is the difference between array and ArrayList in Java?' (Core Java, Medium), 4. 'How do you find the largest and smallest element in an array?' (Arrays, Medium), 5. 'How do you reverse an array in Java?' (Arrays, Easy), and 6. 'How do you remove a specific element from an array in Java?' (Arrays, Medium). On the right, a 'Search History' section lists previous searches: 'Array in Java' (with a 'View all' link), 'HashMap in Java', 'Singleton Design Pattern', 'List vs Set in Java', and 'Java OOPs Concepts'. Below this is a 'Related Topics' section with tags for 'Arrays', 'Data Structures', 'Core Java', 'Collections', 'Problem Solving', and 'Interview Preparation'.

5. Question Manager Menu

The screenshot displays the 'AI Interview' application interface. At the top, there's a header with the 'AI Interview' logo, a home icon, a search bar containing 'Array in Java', and navigation icons for a right arrow and settings. Below the header, a message states 'Found 18 results for "Array in Java"'. On the left, a 'Filters' sidebar allows filtering by 'Topic' (Core Java: 12, Data Structures: 4, Interview Questions: 2), 'Difficulty' (Easy: 6, Medium: 9, Hard: 3), 'Organization' (a dropdown menu), and 'Manager' (a dropdown menu). A 'More Filters' button is at the bottom of the sidebar. The main content area shows a list of six questions related to arrays in Java, each with a bookmark icon and difficulty tags. The questions are: 1. 'What is an array in Java?' (Core Java, Easy), 2. 'How do you declare and initialize an array in Java?' (Core Java, Easy), 3. 'What is the difference between array and ArrayList in Java?' (Core Java, Medium), 4. 'How do you find the largest and smallest element in an array?' (Arrays, Medium), 5. 'How do you reverse an array in Java?' (Arrays, Easy), and 6. 'How do you remove a specific element from an array in Java?' (Arrays, Medium). On the right, a 'Sort by' dropdown is set to 'Relevance'. Below it, a 'Search History' section lists previous searches: 'Array in Java', 'HashMap in Java', 'Singleton Design Pattern', 'List vs Set in Java', and 'Java OOPs Concepts', with a 'View all' link. At the bottom right, a 'Related Topics' section includes tags for 'Arrays', 'Data Structures', 'Core Java', 'Collections', 'Problem Solving', and 'Interview Preparation'. A user profile dropdown menu is open in the top right corner, showing options for 'My Profile', 'Manage Questions', 'Manage Metadta', and 'Logout'.

How do you reverse an array in Java?

Arrays

Easy

✦ Answer

You can reverse an array in Java by swapping elements from the start and end of the array, moving towards the center.

🔗 Approach

- 1 Initialize two pointers, one at the start and one at the end of the array.
- 2 Swap the elements at these pointers.
- 3 Move the start pointer forward and the end pointer backward.
- 4 Repeat until the start pointer is greater than or equal to the end pointer.

📄 Code Example

Java

```
1 public class ReverseArray {
2     public static void reverse(int[] arr) {
3         int start = 0, end = arr.length - 1;
4         while (start < end) {
5             int temp = arr[start];
6             arr[start] = arr[end];
7             arr[end] = temp;
8             start++;
9             end--;
10        }
11    }
12 }
```

Copy

📄 Example

Input: [1, 2, 3, 4, 5]

Output: [5, 4, 3, 2, 1]
